Abstract

This document provides a curated list of courses (Coursera, Pluralsight, A Cloud Guru), training repositories, and reference books to help contributors ramp up on the technologies used in **Market Screener**. Resources are selected for quality, relevance, and practical applicability.

Contents

1 Prerequisites	2
2 Coursera Courses	2
3 Pluralsight Courses	2
4 GitHub Training Repositories	2
5 Reference Books	2
6 Suggested Learning Path	2
7 Free Resources	3

Prerequisites

Before starting the courses below, ensure you are comfortable with: Python, pandas, quantitative indicators, APIs.

Coursera Courses

Course	Link	Why relevant
Financial Engineering and Risk Management	link	Quantitative finance and screening rules.

Table 1: Coursera

Pluralsight Courses

Course	Link	Why relevant
Data Analysis with pandas	link	Indicator calculations.

Table 2: Pluralsight

GitHub Training Repositories

- [twopirllc/pandas-ta](#) — Technical analysis metrics.

Reference Books

- *Python for Finance* — Yves Hilpisch, 2nd ed.. Pandas, NumPy, data visualisation for financial data.

Suggested Learning Path

1. Complete prerequisites (1–2 weeks).
2. Work through the Coursera specialisation most relevant to the repo’s domain (4–8 weeks).
3. Clone the repository, read `README.md` and `INFRASTRUCTURE.md`.
4. Run the service locally following the **Local Run** section of `INFRASTRUCTURE.md`.
5. Study the Pluralsight courses for the specific tools used (2–4 weeks, parallel).
6. Contribute a small fix or documentation improvement as a first PR.
7. Study the GitHub training repositories for advanced patterns.

Free Resources

- [Python Official Tutorial](#) — free, authoritative.
- [Kubernetes Interactive Tutorials](#) — browser-based k8s labs.
- [FastAPI Tutorial](#) — official, comprehensive.
- [PyTorch Tutorials](#) — official, covers all levels.
- [DeepLearning.AI Short Courses](#) — free, recent AI topics.
